CHICAGO 16, ILLINOIS

GAS ABSTRACTS

VOLUME 10

1954

AFFILIATED WITH

ILLINOIS INSTITUTE OF TECHNOLOGY

Gas Abstracts is published and distributed monthly by the Institute of Gas Technology. The current technical literature is reviewed and articles pertaining to the Gas Industry are abstracted. These abstracts are grouped by subject and arranged alphabetically in each group. The thirteen groupings are presented below—

Contents

1. Gas Industry—General information and news items, statistics, business regulations, and other articles of general interest.
2. Appliances—Burners, ranges, cooking equipment, air conditioning equipment, water heaters and other gas appliances for domestic and commercial use.
3. Combustion and Industrial Furnaces—Combustion of gaseous, liquid and solid fuels; design of industrial furnaces; control of furnace atmospheres.
4. Carbonization and Gasification—Manufacture and purification of producer gas, blue gas, carburetted water gas, synthetis gas; carbonization and gasification of coal; and gasification of oil.
5. Natural Gas and Natural Gas Condensates—Production, transmission, distribution and storage of natural gas and natural gas condensates; distribution of LP-gas mixtures; carbon black and chemicals from natural gas and natural gas condensates.
6. Petroleum and Synthetic Liquid Fuels—Production, refining, cracking, alkylation, isomerization, and utilization of petroleum and production of synthetic liquid fuels by the Fischer-Tropsch reaction and hydrogenation.
7. Analytical Methods and Tests—New and improved methods pertaining to gas making materials, processes, products, and by-products.
8. General and Physical Chemistry—Data on chemical and physical properties of elements and inorganic compounds; new reactions; and methods for carrying out established reactions.
9. Organic Chemistry—Data on organic compounds closely related to the Gas Industry; new reactions; new methods.
10. Chemical Engineering—Data and methods for fluid flow, heat transfer, and unit operations of distillation, evaporation, extraction, drying, and filtration.
11. Process Equipment and Instrumentation—Information on new equipment for process operations and process control.
12. Materials of Construction—New developments in refractories, heat and corrosion resistant materials, new alloys applicable to the Gas Industry, and other materials of construction.
13. New Books—Recent books pertaining to the field of gas technology.

The Institute of Gas Technology was founded in 1941 by members of the Manufactured and Natural Gas Industry to accomplish the following objectives:

1. *To train personnel for the Gas Industry.*
2. *To collect and disseminate scientific information of interest to the Gas Industry.*
3. *To prosecute fundamental and applied research for the Gas Industry.*
4. *To stimulate and correlate research within the Gas Industry.*

SUBJECT INDEX

A

ABSORPTION
- Absorption method for separating hydrocarbon gases 141
- Absorption in falling liquid films 91
- Absorption in a venturi atomizer 206
- DMF-Acetylene recovery solvent 52
- Liquid films in study of absorption 89
- Problems in gas dehydration using glycol 27
- Purified hydrogen from a hydrocarbon mixture 196
- Symposium on gas absorption, Birmingham, England 149
- Three processes compared for gasoline extraction 64

ADSORPTION
- Activation of carbons 148
- Adsorption of argon on carbon blacks 43
- Adsorption of hydrocarbons on Fuller's earth 89
- Adsorption on carbon surface 32
- Ammonia and hydrogen on metal films 31
- Drying of air in fixed beds 16
- Entropies of adsorbed molecules on molybdenum 50
- Hydrocarbons adsorbed on rutile 222
- Kinetics of N_2O and carbon reaction 40
- Methanol on carbon adsorbents 163
- Olefins from paraffins by selective sorption 185
- Recovery fractions from separately withdrawn streams of solid 205
- Storage by adsorption on silica-gel 175
- Surface properties of silica gels 51

AIR
- Pollution
- Accepted limit values of air pollutants 139
- Hydrocarbon gases as air contaminants 87
- London fog disaster of December 1952 1
- Oil industry not smog offender 100
- Refineries aren't top smog makers 100
- Research on air pollution 139

ANALYSIS & TESTING
- General materials
  - Coal
    - Meeting of IOS/TC 27 70
    - Sampling devices check coal-mill performance 74
    - Test for classification of coals 140
  - Gases
    - Acoustic methods for gas analysis 108
    - Combustion products I of Peroxides 146
    - Combustion products II Methanol Formaldehyde 146
    - Combustion Products III Organic Peroxides 181
    - Determining gases in metals 49
    - Gas calorific value control 124
    - Natural gas correlations 124
    - Natural gasoline analysis 108
    - Non-condensable impurities in gases 31
    - Odor threshold and warning levels gas detector 66
    - Representative samples to continuous analyzers 13
    - Saturating gas with water vapor 49
    - Instrument thermal conductivity using thermistor 129
    - Viscosity of exhaust-gas mixtures 148
  - Petroleum
    - Arsenic traces in oil 108
    - Automatic sampling of hydrocarbons 88
    - Crude oil characterization 146
    - Chromatographic fractionation of crude petroleum 88
    - Slag and corrosion in gas-turbine 99
    - Sulfur in drip oils 202
    - Surveying refinery waste streams 202
    - Thiophenic and non-thiophenic sulfur in petroleum 203
  - Tar
    - Assay method for primary yields of soft pitch 50
    - Oil yield of lean shale 13
- Particular Methods
  - Carbon Dioxide Determination
    - Carbon dioxide in ethanolamine 108
    - Free and combined CO_2 waters 12
    - Volumetric determination of C and H 181
  - Carbon Monoxide Determination
    - Cuprous chloride solutions for CO 87
  - Coal
    - Ash
      - Germanium in coal, coal ash, and flue dust 201
      - Potassium and Sodium in coal ash 201
      - Size-consist of fly ash 202
      - Spectrographic determination of sodium and potassium 201
    - Moisture
      - Dolch method for moisture in coal 13
    - Sulfur
      - Bromine by unnecessary Eschka 109
    - Ultimate
      - Coal Elementary Composition and density 61
      - Trishydroxylamine phosphate for removal of nitrogen oxides 145
    - Volatiles
      - Volatile matter in coke 129
  - Dust Determination
    - Collection of laboratory dusts 202
    - Dust-sampling equipment and technique 13
    - Errors in stack dust sampling 193
    - Solid and liquid impurities in synthesis gas 101
    - stack dusts, multiple sampling nozzles 192
  - Hydrogen Determination
    - Determining H_2 in gas 108
    - Gasometric method for hydrogen 182
    - Hydrogen by slow combustion 220
    - Measurement techniques 220
  - H_2S Determination
    - Hydrogen sulfide and soluble sulfides 88
    - Volumetric determination of sulfides 130
  - Hydrocarbons
    - Light Hydrocarbons
      - Mass spectrometric analysis mixtures 70
    - Aromatics
      - Aromatics with picric acid-nitrobenzene 87
      - Gas oil and cycle stock from catalytic cracking 146
      - Hydrocarbons by elution chromatography 146
      - Naphthalene in wash oil and gas 49
      - Pollution by polycyclic hydrocarbons 12
      - Ring content of aromatic fractions 181
    - Butadiene
      - Automatic sampling of hydrocarbons at plant 71
    - Olefins
      - Olefinic hydrocarbons in air 88
      - Olefin group types of chromatographic and infrared 221
  - Moisture Determination
    - Accuracy of the Karl Fischer titration 162
    - Karl Fischer method, reviewed 13
    - Sampling and moisture of coke 101
  - Nitrogen Determination
    - Colorimetric determination of Nitrogen 221
    - Kjeldahl digestion tempera-

ture, catalyst, and oxidizing agent 109
Modified semi-micro kjeldahl 182
Nitrogen by flame spectroscopy 109
Nitrogen content of noble gases 109
Nitrogen in petroleum by hydrogenation 49
Review of Kjeldahl method 70
Semi-micro Kjeldahl method 162
Organic Sulfur
Qualitative tests for petroleum sulfur 109
Thiols from petroleum distillates 87
Oxygen Determination
Direct determination of oxygen 13
Low concentrations of oxygen 162
Magnetic oxygen analyzer in aerobic oxidation 130
Magnetic susceptibility for oxygen in gas 71
Manganous hydroxide 130
Oxygen in gases 13
Phenols
Phenols in waste waters by ultraviolet 88
Sulfur Determination
Bromine in determination of sulphur 109
Burning in oxygen titrating iodometrically 88
Combustion for sulfur and halogen 32
Combustion and volumetric determination of sulfur 222
Elemental sulfur colorimetrically 147
Lamp method sulfur in gasolines 32
Modification of ASTM lamp method 182
Rapid lamp method for heavy distillates 182
Rapid precipitation of barium sulfate 14
Separation of sulfur compounds from petroleum 221
A submicro method for sulphur 147
Sulfates by diazo titration of benzidine 222
Sulfur analysis by combustion tube 182
sulfur in gases coulometric titration 163
Titrimetric determination of sulfate 182
Sulfur Oxides Determination
Common atmospheric pollutants 12
Continuous oxidant recorder 12
Water
Bureau of Mines dew point recorder 130
Dissolved water in liquids 146
Volatile contaminants in water 71
Techniques
Absorption
Separation techniques on shale-oil 221
Calorimetry
All-electric calorific value controller 142
Automatic measurement of specific heat 147
Bomb for precision calorimetry sulfur compounds 90
Corrections of bomb calorimetric data to sulfur 90
Gas calorific value control 142
Heavy hydrocarbons and lower heating value 147
Chromatography
Analysis by gas chromatography 220
Adsorption analysis of petroleum aromatics 219
High-boiling fractions of coal tar 32
Distillation
ASTM-type vacuum distillations 70
Distillation analysis and improvements reviewed 70
High-boiling petroleum distillates 162
Natural gasoline analysis 108
Thermocouple for controlling condensation 129
Electron Microscope
Aerosols for electron microscopy 110
Replicas and their application 184
Review of electron microscopy 70
Equipment
Acoustic methods for gas analysis 108
Aerosols for electron microscopy 110
Balance for recording rapid changes 187
Dew point recorder 130
Six methods for specific gravity of gases 146
Gases
Automatic valve bubbler pipettes 182
Humidity in analysis of gases 202
Lampblack in gases from CCR sets 219
Minor components of a gas mixture 87
Sampling of gas-condensate reservoirs 163
Sampling systems for continuous analyzing 50
Sampling techniques in air-pollution 201
Infrared Methods
Infrared spectra for 47 dicyclic hydrocarbons 222
Accuracy with infrared 202
Energy transfer in hot gases 152
Grating spectrometer for analysis 220
Hydrocarbons via infrared instruments 220
Infrared spectra of coal chars 32
Olefin by infrared 221
Review infrared spectroscopy 72
Unsaturate S in Fuel Gases 220
Mass Spectrometer Methods
Contaminates in lube oil 31
Mass Spectrometry in Aromatic analysis 129
Spectrographic analysis of solids 147
Spectrophotometric atlas Transition of OH 164
Trace elements in fuel oils 31
Particle Size
Control particle shape and size 206
Materials influence choice of grinding equipment 206
Representing size distributions 186
Radioactivity
Argon-41 to detect leaks 183
Trace impurities by neutron activation 31
Spectroscopy
Advances in infrared spectroscopy 109
Visual-arc spectroscopic analysis 12
Standards
Classification of coals: introductory 140
Operations of the National Bureau of Standards 77
Statistical
Outline of multifactor experimentation 226
Rapid statistical analysis techniques 226
Evaluation of test procedures 163
Statistics in refinery and petrochemical operations 149
Effect of one variable on others 53
Multiple factor experiments 53
Theory of complete and incomplete mixing 54
Surface Area
Adsorption of hydrocarbons on fuller's earth 89
Adsorption on saran charcoal 183
Cobalt catalysts on diatomaceous earth 47

C

CARBON BLACK
Manufacture
Black manufacture with gas from Alberta 157
Cyclone counter-current flow of fuel gas-air and decomposing feed 7
Heavy liquid process with two-fluid nozzle 30
Improvements in furnace black process by rapid mixing 214
Liquid hydrocarbon process spray nozzle design 30
Reducing pH of furnace blacks 103
Slurry cooling and wet fanning of furnace gases 81
Very fine carbon black by explosion process 7
Properties
Adsorption of argon on carbon blacks 43

CARBONIZATION
- By-Products
  - Low back-pressure saturator for ammonia 101
- Coal Preparation
  - Oaxaca coal fields of Southern Mexico 142
  - Reactions of fuel sulfur 193
- Coke Formation
  - Beneficial effects of rapid carbonization 155
  - Blast furnace coke from Lorraine or Saar coals 121
  - Carbonization of blends 155
  - Carbonization up to 500°C
  - Coal-mineral pitch-ligneous mixture trays carbonized 26
  - Coal liquefied, atomized, and carbonized in a fluid bed 40
  - Coal pyrolysis in four temperature regions 24
  - Coals contacted with char 140
  - Coke structure and coke formation 40
  - Coking mechanism of organic compounds 80
  - Coking a mixture of carbon and pitch 4
  - Desulfurization of char when gasified 61

Kiln firing heat savings 100
Mixing unit for burner 99
Radiant gas burner 99
Singeing burner 99
Substitutability of high-btu oil gas 118

Inflammability
Additives flame propagation of propane 78
Flame propagation in acetylene 119
Ignition temperature of coals 61

Liquid Fuels
Additives reduce ash deposits 107

Reactions
Combustion products. III organic peroxides 181
Effect of pressure on smoking of flames 59
Flame stability in heterogeneous mixtures 59
Reactivity to carbon dioxide 62

Smoke
Cooperation between air pollution control and schools 39
Influence of sulfuric acid upon dew-point 79
New instrument for measuring smoke 94
Smokeless burning of waste gases 79
Smoking of laminar diffusion flames 79

Temperature Movement
Energy transfer in hot gases 152

CONSTRUCTION MATERIALS

Ceramics and Glass
Cement-line pipe for corrosion resistance 36
Ceramic for high-temperature application 76
Concrete high-pressure pipe lines 208
Concrete holder tank 114
Monolithic linings for refinery 116
Refractory ceramic coating 36

Corrosion-Resistant
Asbestos-cement pipe 135
Bronze oil-sealing sleeves in gas compressors 214
Corrosion in relation to welding 188
Metals in coke-oven byproducts industry 188
Properties of graphite 32
Stainless steel suitability 36

Heat Resistant
Alloy for service to 2200°F 76
Ceramics protect jet engines 151
High-alloy castings in steel industry 151
Record container performance 2

Insulation
Hot plate for conductivity of insulating solids 55
Insulation under floor 58
Nomograph for heat losses through mineral wool 136
Pick the right pipe insulation 18
Vermiculite concrete fireproofing 168

Metals
All-aluminum gas line 151
Alloys as heat-exchanger materials 168
Brittle failure of non-ship steel-plate structures 76
Corrosion resistance of welded stainless 168
Identifying common metals 188
Inspecting welds by radioactive isotopes 116
Stresses in branch connections 198
Valves to combat corrosion 208

Plastics
Internal coating of pipe 135
Lining a pipe with butyrate plastic 144
Nine-mile plastic line 56
Plastic gas mains, Tucson 116
Rigid polyvinyl chloride plastics 151
Unplasticized polyvinyl chloride for construction 208

Refractories
Applications of carbon-graphite 228
New refractory hard metals 208
Refractory for gas-fired equipment 95
Refractory materials in industrial furnaces 151
Structure of solid silicon monoxide 33

INSTITUTE OF GAS TECHNOLOGY HOME STUDY COURSE

NATURAL GAS PRODUCTION AND TRANSMISSION

The Institute of Gas Technology is extending its educational services to the Gas Industry by bringing instruction, through Home Study Courses, to students and utility employees who are unable to attend classes at the Institute.

The courses are being prepared in cooperation with the American Gas Association, which appointed a committee of utility executives to act in an advisory capacity. This cooperation, and the assistance of Gas Industry specialists as contributors and reviewers, give the IGT Home Study Courses a degree of authority and comprehensiveness seldom attained in works of this type.

The carefully considered plan adopted for the texts is to present the subject matter so it can be understood by persons with little or no training in the fields under discussion; yet, the coverage of all subjects is to be sufficiently comprehensive that the courses can be integrated with cadet engineering programs, and can serve as "refresher courses" for more experienced utility personnel, particularly the many whose work has been so long restricted to one phase of operations that they have lost contact with the progress of others.

The first of these courses, "Natural Gas Production and Transmission," is now available.

Format and Binding

The work is printed in eight sections of two chapters each, with a ninth section containing Chap. XVII and Index. Each section is enclosed within a flexible cardboard cover, and can be carried like a magazine by those who wish to study while using public transportation to and from work.

All sections are punched for insertion in a gold-stamped Fabrikoid stiff-covered binder furnished with the course.

Conduct of the Course

The course is offered under several plans, to suit the needs and circumstances of individual enrollees, or groups of enrollees, and to fit into employee training programs of companies.

Plan A

On enrollment, the student is supplied with the complete text. He is expected to study each chapter, consult a reasonable number of the references given, and submit a written report on each assignment. These reports may be submitted as rapidly as they can properly be prepared; they will be graded by a member of the Institute's teaching staff and returned with constructive criticisms.

The average student can successfully complete this course in one year if he devotes a few hours per week to conscientious study of it. He is required to complete it within two years of his date of enrollment; failing to do so, he releases the Institute of further responsibility for instruction in this course.

Satisfactory completion of the course will be recognized by the award of a suitable certificate by the Institute.

Under this plan the total cost is $75, payable in advance as an enrollment fee.

Plan A—Multiple Enrollments

Companies which encourage their employees to take this course can effect a considerable saving for each enrollee by securing a minimum of 10 enrollments under the following graduated scale:

$650 for the first 10 enrollments
$65 each for the next 10 enrollments
$60 each for the next 10 enrollments
$55 each for the next 10 enrollments
$50 each for the next 10 enrollments
$45 each for all over 50 enrollments

These purchases will be cumulative; that is, when enrollments entered by one company pass the 20 mark, additional enrollments can be made at any subsequent time at the progressively lower costs scheduled. Companies may wish to anticipate this reduction and offer this Home Study opportunity to employees at the estimated average cost.

Plan B

This is essentially the same as **Plan A**, except that it contains a "time payment" provision under which the enrollee pays only $27.50 upon enrollment, and receives at that time the binder and first six chapters of the course.

When he submits his reports on Chap. V for grading, he is required to make an additional payment of $25.00, upon receipt of which the Institute will send him Chaps. VII-XII. A third and final payment of $25.00 shall be made when his reports on Chap. XI are submitted; the remaining chapters will then be mailed to him.

In all other respects, including the two-year limitation on completion of the course, and the award of a certificate, **Plan A** will be followed.

Plan C

Students who believe they can progress through the course unaided may secure the complete text (binder included) for $37.50. Purchase at this price does not provide for further instruction or the award of a certificate. If after study of the course the student should find that grading and constructive criticism by the Institute is desirable, he may have his enrollment transferred to **Plan A** by payment of an additional $37.50.

Group Plan

The Advisory Committee suggested that this course be made available under a "group plan" to assist gas companies in training employees.

The plan envisions a meeting of the students for a discussion period following their home study of each chapter. Each discussion period should be led by a staff member who has familiarized himself with that particular phase of the course.

The **Group Plan,** with formal reviews of each member's progress at stated intervals, offers the greatest incentive to effective participation, and satisfactory understanding and completion of the course by the employee.

To implement this plan, the Institute offers texts in lots of 10 or more at lower prices. As in the case of the multiple enrollment provision for **Plan A**, purchases under the **Group Plan** are cumulative and this graduated scale applies:

$350 for the first 10 texts
$35 each for the next 10 texts
$30 each for the next 10 texts
$25 each for the next 10 texts
$20 each for the next 10 texts
$15 each for all over 50 texts

Under this plan, the group leader or designated employee of the company must assume responsibility for all necessary guidance and supplementary instruction of members of his class, including grading of papers, and criticisms.

To assist the group leader or company instructor the Institute will supply him, at the time of shipment of the texts, with sheets of answers to the problems printed as assignments in the course, and grade record cards.

Upon notification by the company, the Institute will issue a Certificate of Accomplishment, to be signed by a company official, for each employee who satisfactorily completes the course.

For Reference and Library Use

The text of the Home Study Course is the most up-to-date and comprehensive single compilation available on Natural Gas Production and Transmission, and with its numerous bibliographic notes is invaluable as a reference work.

Libraries, schools, companies and individuals wanting texts for this purpose may purchase them at $37.50 per copy.
